

PUBLICATION OF DOBREV & LYUTSKANOV LAW FIRM IN GLOBAL
LEGAL INSIGHTS 2022 TO ARTIFICIAL INTELLIGENCE AND BIG DATA

For a third consecutive year Dobrev & Lyutskanov Law Firm participated in the issue of the Global Legal Insights series, dedicated to Artificial Intelligence and Big Data. The Global Legal Insights guides are issued every year and are aimed at analysis of the legislation of the respective countries in focus and their development in specific areas in the context of international business.

In May 2022 was published GLI to AI, Machine Learning and Big Data 2022, whereas Dobrev & Lyutskanov joined in with an analysis of these matters in Bulgarian law. The text reviews matters pertaining to the relations arising from the creation of Artificial intelligence and self-teaching algorithms, as well as the ownership over algorithms created without human interference, along with the up-coming European AI regulation, proposed by the European Commission. The topics of rights over big data and the requirements for personal data protection during automated data processing were also discussed in the analysis.

You can find the analysis at the following url – [AI, Machine Learning & Big Data Laws and Regulations | Bulgaria | GLI \(globallegalinsights.com\)](#), as well as the whole legal guide – [at AI, Machine Learning & Big Data Laws and Regulations | GLI \(globallegalinsights.com\)](#)
